Junior / Trainee Software Developer

[Portfolio](#) · [GitHub](#) · [LinkedIn](#)

Software development student (UTN's Tecnicatura Universitaria en Programación) looking for a first trainee/junior developer role. I come from a sales background, where I spotted a recurring manual process and solved it by building my own Python tool, now used daily at my job. Outside of coursework, I spend my free time on personal projects (automation, tools for retro game development, this very portfolio) to learn by building real things.

EXPERIENCE

Sales Associate

March 2012 – Present

Papillon Libros S.A. · Buenos Aires, Argentina

- Customer service and sales for books and related materials.
- Identified a recurring operational bottleneck (manually entering and cross-checking invoices, credit notes, and delivery notes from several publishers) and built **Dosto**, a Python tool that automates PDF data extraction and stock cross-checking, now used daily at the store.
- Combine over a decade of customer-facing work with hands-on technical initiative: spotting a real problem and building the fix without being asked.

SELECTED PROJECTS

Dosto — github.com/valenzuelagustavo/Dosto

Internal tool that automates the extraction and cross-checking of invoices, credit notes, and delivery notes at Papillon Libros; includes a desktop UI for non-technical coworkers.

Personal Portfolio (this site) — portfolio-gustavo-enrique-valenzuel.vercel.app

Bilingual (ES/EN) site built with Astro, Tailwind CSS, and TypeScript, with Markdown content collections and continuous deployment on Vercel.

[Astro](#) [Tailwind CSS](#) [TypeScript](#)

Swapprite — github.com/valenzuelagustavo/Swapprite

Python CLI + GUI tool that replaces an indexed sprite's palette by picking the perceptually closest color in CIELAB space, for retro dev pipelines.

[Python](#) [Pillow](#) [Tkinter](#) [CIELAB](#)

Asteroids in Python — github.com/valenzuelagustavo/Asteroids

Clone of the classic arcade game with Python and Pygame; a guided project (Boot.dev) where object-oriented programming really clicked for me.

[Python](#) [Pygame](#) [OOP](#)

TMNT — Sega Mega Drive port — github.com/valenzuelagustavo/TMNT-ARCADE-MEGADRIE-PORT

Work in progress

Unofficial C/SGDK demake-port of the 1989 Konami arcade game; 2-player character select, combat, and level scrolling with circular-buffer background streaming on hardware with no framebuffer.

[C](#) [SGDK](#) [Sega Mega Drive](#)

LOGIK//CORE — github.com/valenzuelagustavo/logikcore-utn-ingreso

Spy-terminal-themed simulator for the UTN entrance exam; pedagogical design and curation are my own (30+ verified questions), implementation directed with AI assistance (Claude).

EDUCATION

University Programming Degree (TUPad)

In progress (1st semester) · expected graduation 2028

Universidad Tecnológica Nacional (UTN), Argentina

Technical High School Diploma — Goods & Services Production

2002

E.E.T. N°5 "Dr. Roberto Noble", San Justo, La Matanza, Buenos Aires, Argentina

TECHNICAL SKILLS

Languages	Python, C, JavaScript / TypeScript
Web	Astro, Tailwind CSS, HTML, CSS
Libraries / Frameworks	Pygame, Pandas, pdfplumber, CustomTkinter, Pillow, Tkinter
Tools	Git, GitHub, Linux, command line (CLI), Vercel
Fundamentals	Object-oriented programming, problem solving, debugging
Language Proficiency	English (A2, freeCodeCamp)

Each project includes public source code; the online portfolio notes, with the same transparency, what's finished vs. still in progress.
